Thousands of acres of uncultivated land in and about many large cities will be utilized this year to furnish employment and recreation to home gardeners who know that by raising their own supply of vegetables they can materially reduce their living costs.

Enough for Average Family. One-tenth of an acre of fairly good ground—a square about 65 feet each way-will supply the greater part of the vegetables needed by the average family, say garden specialists of the department. The cost of all seeds and fertilizers for a garden of this size should not exceed \$15 to \$18, and may not cost more than \$5 or \$10. Experience has shown that not more than 100 hours should be required for planting and caring for a tenth-acre garden. This time is so distributed throughout the season that the work Eggs to Be Shipped by Parcel Post can be easily done by most persons working in factories, stores, or offices, It means an average of about five or six hours a week for a period of 20 consumer may desire 5 dozen eggs a weeks or merely enough time for prop- week, the price to be an agreed-upon er outdoor recreation and exercise figure above the wholesale quotation necessary for good health.
